

Press Release Texcare 2012

Wolfhausen, May 2012

Schulthess machines: intelligent innovations for optimal laundry care!

Once again, Schulthess is launching effective innovations to make day-to-day laundry easier. As of now, a self-cleaning heat pump dryer is available. In addition, the topLine and proLine machines will be equipped upon request with a lint trap drawer to prevent drain pipes from clogging, and with a dosing pump rack for liquid detergent.

Laundry care is made simpler with the professional machines from Schulthess. Customised laundry systems are available to satisfy even the strictest requirements, leaving nothing to be desired. The topLine, proLine and industrial product lines are setting new standards once again: the variety of profiClean programmes has been expanded to specifically address an even wider range of needs. And with the optimised Wet-Clean and disinfection programmes, Schulthess reinforces its position as an expert in laundry care for any type of fabric.

Schulthess innovation number one: heat pump dryer

At Texcare, Schulthess will introduce a highly effective commercial heat pump dryer: it is easy to operate, offers up to 60% in energy savings, works with fast-acting programmes and is gentle on the fabrics. A particularly practical feature is that the dryer is equipped with an automatic self-cleaning system to ensure maximum energy efficiency throughout its entire lifetime.

Schulthess innovation number two: lint trap drawer

Another convenient innovation is the lint trap drawer. Special programmes were developed by Schulthess to thoroughly clean and disinfect mops and cleaning cloths. However, the lint generated in the process could clog drain pipes. To prevent this, the base of the Spirit topLine and proLine washing machines will be provided upon request with a water tank with integrated lint trap drawer. The drawer is easy to open and the lint trap can be effortlessly cleaned.

Schulthess innovation number three: dosing pump rack

The Spirit topLine and proLine machines also feature the following innovation: Starting immediately, a dosing pump rack for liquid detergent is available as an addition. It is directly attached to the washing machine to save space. The integrated automatic liquid detergent dosing system is designed to save detergent. It is ecological, guarantees maximum process security and is very easy to use.

Schulthess exclusivities

A whole host of exclusive features offered by the Schulthess machines enables users to take optimal care of their laundry. Over 70 profi-Clean programmes are available to meet any need. Wherever hygiene plays a major role, for example, in retirement and nursing homes, in hospitals and commercial cleaning operations, the Schulthess disinfection programmes are preferred. The effectiveness of these disinfection programmes was tested and confirmed by the wfk Institute for Applied Research in Krefeld.

Schulthess Wet-Clean process for difficult-to-clean fabrics

The Wet-Clean process developed for Schulthess machines is based on the principle of wet cleaning. With this process, fabrics can be cleaned and impregnated in a washing extractor using environmentally compatible, specifically developed liquid detergents and programmes especially designed for different types of textiles. The special Wet-Clean programmes of the Schulthess washing machines and commercial dryers are gentle on the fabrics, leaving them hygienically clean and odourless. Washing with the Wet-Clean process protects the fabrics and ensures an above-average lifetime and extended use of textiles.

Optimal care with the Schulthess Wet-Clean process

Uniforms and work clothes, coats, pants, jackets, suits, pullovers (angora, wool, cashmere), silk, wedding dresses and ball gowns, breathable athletic wear and rainwear, down jackets, ski suits (Gore-Tex, Sympatex), duvets, blankets, quilts and thermal blankets, sleeping bags, protective clothing for fire fighters and emergency services, leather apparel, motorcycle attire, and even difficult-to-clean laundry from nursing homes and hospitals with particularly stringent hygiene and disinfection requirements – all this and more can be optimally cleaned with Wet-Clean to preserve and protect the fabrics.

The perfect team for washing and drying

Schulthess washing machines and dryers are perfectly synchronised. Used together, they form an ideally matched team to care for your laundry. The programmes optimally complement each other and therefore produce superior results.

Easy on the budget and on the environment, Swiss made – of course

The laundry products made by Schulthess guarantee high-quality washing results. At the same time, they are easy on the budget and on the environment due to maximum efficiency and minimum operating expenses. The consumption of Schulthess machines in terms of electricity, water and detergent is simply unbeatable. All machines, without exception, are Swiss made, highly durable and robust.
